Six7

Owned by you. Priced without seats.

The business apps Google Workspace never shipped.

Six7 gives a Google Workspace organisation the CRM, service desk, boards and contract register it already runs on spreadsheets - inside its own tenant, on code it owns, at a flat fee that never counts seats, with a contractual path to scale.

	A	B
1	**Six7 app**	**Replaces the sheet for**
2	CRM	customers and deals
3	Service desk	requests and tickets
4	Boards	tasks and projects
5	Contract register	contracts and renewals

Why Six7

Workspace never shipped the apps a business runs on, so teams make do with spreadsheets, or rent per-seat software that keeps their data somewhere else.

Your tenant

Apps and data stay in your own Google Workspace.

Your code

You own the code the apps run on.

Your price

One flat fee. Hiring never raises the bill.

A path to scale, written into your contract

1

Start

Google Sheets and Apps Script, where your data lives.

2

Grow

Firestore, when volume outgrows a sheet.

3

Scale

Cloud Functions on Firestore, for enterprise scale.

Built by Gaston Fourcade, who wrote his father's business systems in dBASE and Lotus 1-2-3, then led technology at Globant and Auna.

Six7 is in alpha. We're inviting Google Workspace organisations and solo businesses using personal Gmail accounts to shape it with us.

Six7 - alpha programme

Google Workspace is a trademark of Google LLC. Six7 is not affiliated with Google.

Solo businesses: CRM and Kanban have been tested and validated with personal Gmail accounts for one-person businesses.
